

Give every talent a chance.

PlayerDNA Labs turns a single training or match video into a complete athlete profile — speed, power, stamina, biomechanics, injury risk, neuroscience and the football position a player is built for. This document sets out the full assessment platform and the commercial terms for individual athletes and academies.

PREPARED FOR

Athletes · Academies · Clubs

FASTER FEEDBACK

One platform — from a phone on the touchline to a full performance lab.

Most assessment platforms start at the elite and stay there. PlayerDNA starts on any phone and scales to ground-truth lab hardware — using the **same athlete profile** the whole way. The result is a single, objective source of truth that protects players, lowers cost, and accelerates development from grassroots to the national team.

Eight engines that read the game.

Every athlete passes through the full pipeline — from raw footage to a defensible position recommendation and a coach-ready report generated in minutes.

ENGINE 01

Video Movement Analysis

Frame-by-frame tracking turns pixels into real-world metres.

- Speed, acceleration & distance
- Sprint count & direction
- Heatmap & intensity zones

ENGINE 02

Body & Pose Analysis

Keypoints reveal posture, joint angles, balance & fatigue.

- Jump height & joint angles
- Landing balance & symmetry
- Early-vs-late fatigue

ENGINE 03

Athlete Input Profile

The context the camera can't see — captured from the athlete.

- Physical & medical background
- Technical self-ratings
- Preferred foot & position

ENGINE 04

Position Engine

All eight positions scored — top three, with transparent reasons.

- Top-3 positions with % fit
- Why you fit & what limits you
- Training to raise the fit

ENGINE 05

Performance Dashboard

Every score in one glanceable view.

- Score cards & performance radar
- Movement heatmap & trends
- Injury-risk map at a glance

ENGINE 06

Professional Report

A coach-ready PDF, generated in minutes.

- Physical & biomechanics findings
- Injury-risk & structural notes
- Speed, stamina & technical plans

ENGINE 07

Injury-Risk & Biomechanics

Spot injury risk & energy leaks before they cost games.

- ACL, hamstring & ankle risk
- Movement asymmetry & posture
- Energy-leak detection

ENGINE 08

Cognitive & Tactical

The mental side — the awareness that picks the position.

- Decision speed & scanning
- Anticipation & positioning
- Pressure response & focus

— 03 · THE TEST BATTERY

Eighteen protocols. One athlete profile.

Every external score maps to an established, peer-reviewed protocol or published norm. Proprietary AI metrics are listed separately and clearly labelled.

16-Dimension Fit Model

PlayerDNA

04 · NINETEEN MODULES

Three intelligence pillars, one comprehensive athlete model.

Beyond the core engines, PlayerDNA is a complete screening, injury-risk, youth-development and position-intelligence platform.

Physical Performance I

- 01

Player Core Profile

Single source of truth; youth pathway with guardian details.
- 02

Anthropometric Assessment

BMI, body-fat, muscle mass, L/R imbalance vs. norms.
- 03

Speed & Acceleration

10/20/30 m sprint, max speed, repeated-sprint ability.
- 04

Agility & Reactive Ability

Illinois agility, change-of-direction, decision reaction.
- 05

Jump & Power Profiling

CMJ, broad jump, RSI, takeoff & landing mechanics.
- 06

Stamina & Endurance

VO₂max, Yo-Yo IR, HR recovery, fatigue resistance.
- 07

Muscle-Fiber Estimation

Fast/slow-twitch profile mapped to suited positions.

Movement & Health II

- 08

Functional Movement & Injury Risk

FMS + Y-Balance graded Low → Critical, routed to review.
- 09

Biomechanical Movement

Movement efficiency, asymmetry & energy-leak detection.
- 10

Foot & Gait Analysis

Pronation, gait stability, shoe & correction notes.
- 13

Return-to-Play Assessment

Hop-test LSI, reinjury risk, conservative readiness call.
- 12

Children & Youth Development

Ages 6–16 mode: safe stages, parent-friendly summary.

11	Cognitive & Neuro Performance Decision speed, scanning, peripheral vision, pressure.
15	Position Recommendation 16 dimensions fused — never one number decides.
16	Dashboard Radar, heatmap, injury map, youth & RTP views.
14	Professional Athlete Report Seven-section coach document, exportable to PDF.
17	Data Model & Export Relational/JSON schema; CSV · JSON · PDF · API.

— 05 · DELIVERY MODES

Start with a camera. Scale to the lab.

The same athlete profile grows with you — camera AI **estimates**, hardware **confirms**.

ESTIMATION

01

Camera-Only · AI

Schools · parents · early scouting

Movement, speed, jump, agility, posture & best-position — estimated from any phone, with no hardware.

- Any smartphone camera
- AI movement & pose estimates
- Best-position & youth pathway

CAMERA + SENSORS

02

Hybrid Performance

Academies & growing clubs

Camera AI plus HR strap, GPS, timing gates & body-composition scale — measured load alongside estimates.

- HR · GPS · timing gates
- Measured load & distance
- Squad comparison & trends

Elite Lab

Elite clubs · national teams

Force plates, pressure mats, smart insoles, VO₂max, lactate & ECG/Echo confirm the profile with lab-grade truth.

- Force plates · insoles
- VO₂ · lactate · ECG / Echo
- Injury screening & pro reports

— 06 · COMPETITIVE ADVANTAGE

Why PlayerDNA wins.

Eleven advantages that separate PlayerDNA from single-purpose video, GPS or lab systems — every one backed by a working module on the platform.

A1 Lower equipment barrier

Replaces 3–4 separate systems — video, GPS, lab testing & scouting — with one profile. Starts on any phone, with zero hardware required.

A2 Faster results

A complete report from a single video in minutes — turning every session into measured feedback up to 5× faster than manual review.

A3 Built-in acceleration plan

Auto-generated, athlete-specific development plan and LTAD pathway — exactly what to train next to raise position fit, not a template.

A4 Precise, defensible results

Every score maps to a validated protocol and is percentile-normalised for age & level across 16 dimensions — evidence, not gut feel.

A5 International standards compliance

Aligned to EUROFIT, ACSM, ISAK, WHO/CDC and the FIFA 11+ protocol; secured to GDPR, SOC 2, HIPAA, NHS DTAC, Cyber Essentials & TX-RAMP.

A6 Neuroscience of the player

A dedicated cognitive & neuro engine measures decision speed, scanning, peripheral vision, focus and pressure response — the brain behind the play.

A7 Fully integrated plan

One profile carries an athlete from grassroots to elite — a single seven-section professional document instead of disconnected reports.

A8 Precise injury prediction

Graded risk for ACL, hamstring, ankle, groin & lower-back, driven by asymmetry, posture and energy-leak detection — flagged before it costs games.

A9 Return-to-play assessment

Hop-test LSI, force symmetry and neuromuscular readiness fuse into a single conservative readiness call with reinjury-risk monitoring.

A10 Every type of assessment

18 protocols and 19 modules covering physical, movement-health and intelligence — anthropometrics to muscle-fiber type in one pass.

A11 Full match analysis

Frame-by-frame tracking delivers speed, distance, sprint counts, heatmaps and intensity zones — the whole game, measured.

CAPABILITY	PLAYERDNA	GPS / WEARABLE	LAB / FORCE-PLATE
Works with zero hardware	Full	—	—
Camera-first movement AI	Full	Partial	—
Best-position recommendation	Full	—	—
Neuroscience & cognition	Full	—	Partial
Injury risk & return-to-play	Full	Partial	Full
Youth development pathway	Full	—	—
Scales to force-plate, VO ₂ & lactate	Full	Partial	Full
One profile, grassroots → elite	Full	—	—

Comparison of platform **categories**, not specific vendors. Camera AI provides estimation; hardware tiers add ground-truth measurement.

Assessment pricing — transparent & tiered.

Two simple structures. Individual athletes are priced by assessment tier; academies and clubs are priced per athlete on a volume scale — the larger the squad, the lower the per-athlete rate.

A • Individual Athlete Assessment

Applies across worldclass, professional, semi-professional and youth athletes. Each engagement delivers a complete 16-dimension profile, professional report and 12-month platform access for that athlete.

MOST COMPLETE

DEVELOPING & YOUTH

\$200 / athlete

Full developmental & LTAD profiling

- ✓ Complete 18-protocol battery
- ✓ Youth development pathway (6–16 mode)
- ✓ Best-position recommendation
- ✓ Injury-risk map & growth tracking
- ✓ 12-month profile & report access

PRIME PROFESSIONAL

\$100 / athlete

Performance & biomechanics profiling

- ✓ Complete 18-protocol battery
- ✓ Performance & biomechanics report
- ✓ Position fit & tactical profile
- ✓ Injury-risk & return-to-play view
- ✓ 12-month profile & report access

VETERAN / MASTERS

\$70 / athlete

Movement & longevity focus

- ✓ Core assessment battery
- ✓ Movement-quality & posture screen
- ✓ Injury-risk & longevity focus
- ✓ Professional report
- ✓ 12-month profile & report access

B • Academy & Club Programmes

Per-athlete pricing on a volume scale, designed to screen an entire squad on one standard. Includes a shared squad dashboard, longitudinal trend tracking and certified-assessor support.

SQUAD SIZE	PROGRAMME	PRICE PER ATHLETE
100 + athletes	Federation / Full Academy Best per-athlete rate · whole-club standardisation	\$100 per athlete
80 - 100 athletes	Large Academy Multi-age-group screening	\$120 per athlete
40 - 80 athletes	Standard Academy Squad-wide assessment & trends	\$140 per athlete
Under 40 athletes	Boutique / Trial Group Small-squad & trial-day screening	\$180 per athlete

EXAMPLE SQUAD	CALCULATION	PROGRAMME TOTAL
30 athletes (boutique)	30 × \$180	\$5,400
60 athletes (standard)	60 × \$140	\$8,400
90 athletes (large)	90 × \$120	\$10,800
150 athletes (federation)	150 × \$100	\$15,000

Notes. All prices in USD and exclusive of local taxes. Individual pricing covers Camera-AI (Mode 01) assessment with full profile and 12-month access. Hybrid (Mode 02) and Elite Ground-Truth (Mode 03) hardware tiers — HR/GPS/timing-gate or force-plate/VO₂/lactate/ECG — are quoted per engagement on top of the per-athlete rate. Volume pricing locks at the band reached by total squad size; the whole squad is billed at that academy band.

Every assessment includes

- ◆ Complete 18-protocol test battery

◆ Top-3 best-position recommendation with reasoning

◆ Biomechanics & movement-quality findings

◆ Auto-generated targeted development plan

◆ Movement heatmap & full-match analysis

◆ 16-dimension fit model & performance radar

◆ Injury-risk map (ACL · hamstring · ankle · groin · back)

◆ Neuroscience & cognitive profile

◆ Coach-ready professional PDF report

◆ Dashboard access & CSV / JSON export

From sign-off to first profiles — fast.

PHASE 01 · WEEK 1

Onboarding & calibration

Workspace setup, age-group structure, capture protocol and one calibration filming session per group.

PHASE 02 · WEEKS 1-2

Capture & assessment

Single video per athlete uploaded; engines produce profiles, reports and squad dashboard within minutes of capture.

PHASE 03 · WEEK 3

Review & development planning

Coaching-staff review session: position fits, injury flags, and athlete-specific acceleration plans handed over.

PHASE 04 · ONGOING

Re-test, trend & certify

Quarterly re-tests track progress; optional certification trains in-house assessors and adds hardware tiers as you scale.

— NEXT STEP

Find every player's best position.

Book a 10-minute demo to see a real athlete profile generated from a single video — and lock in your academy's volume band.

PLAYER DNA

Sport-performance analysis — not medical diagnosis. PlayerDNA Labs provides performance analysis, position-suitability estimation and training guidance. Injury-risk outputs are indicators that prompt professional review, never a diagnosis. Independent product — aligned with leading sports-science practices; not affiliated with, sponsored by or endorsed by FIFA or any named institution. © 2026 PlayerDNA Labs.
